Threat from disease

9C Threat from disease · Lesson 1 of 7

Date _____ Class _____

Today I can

- ☐ I can explain how hygiene, diet, immunisation and medicines have helped people live longer.
- ☐ I can give examples of the five types of disease and say which ones can be passed from person to person.

What happens today

1. Do Now: living longer
2. Learn: Why do we live longer? · Five types of disease · and more
3. Core tasks
4. Challenge, then the exit ticket

Student Book pages 37 to 38 · Workbook pages 27 to 28

What I learned today (one or two sentences)

Key Vocabulary

Term	Definition
disease	something that makes you ill
pathogen	a microorganism that causes disease
infectious disease	a disease caused by a pathogen that can pass from person to person (communicable)
non-communicable	cannot be passed from person to person
deficiency disease	a disease caused by a lack of a nutrient in the diet
genetic disease	a disease caused by a fault in the DNA
lifestyle disease	a disease made more likely by the way we live, e.g. smoking
autoimmune disease	a disease in which the body's own white blood cells attack it
symptom	an obvious effect of a disease, e.g. a rash
hygiene	keeping things clean so pathogens do not spread
immunisation	giving a vaccine to protect against a disease

Quick Review

living longer

In England and Wales in the 1840s, the median age of death was 46. Today it is 83.

1 Suggest two reasons why people live longer today.

2 Name one disease caused by a microorganism.

3 What is a microorganism?

Core 1 of 3

Everyone does these. Answer on the card or under it.

1 Match each type of disease to its example. Draw a line.

deficiency disease	type 1 diabetes: white blood cells destroy cells in the pancreas
infectious disease	flu, caused by the flu virus
lifestyle disease	scurvy, caused by a lack of vitamin C in the diet
genetic disease	lung cancer linked to smoking tobacco
autoimmune disease	sickle cell disease, inherited from the parents

Core 2 of 3

Everyone does these. Answer on the card or under it.

2 Tick one box in each row to show whether the disease is communicable (can be passed on) or non-communicable.

Disease	Communicable	Non-communicable
cholera (bacterium in dirty water)		
anaemia (too little iron in the diet)		
chickenpox (virus)		
cardiovascular disease (heart and blood vessels)		
malaria (protoctist carried by mosquitoes)		
haemophilia (inherited)		

Core 3 of 3

Everyone does these. Answer on the card or under it.

3 Complete the sentences using words from the word bank.

Pathogens are _____ that cause disease.

Keeping drinking water separate from _____ is an example of good _____.

_____ with a vaccine protects a person against a particular disease.

The obvious effects of a disease, such as a rash, are its _____.

4 Anaemia is a disease caused by food that does not contain enough iron. Tick the type of disease that anaemia is.

- ☐ A deficiency disease
- ☐ B infectious disease
- ☐ C lifestyle disease
- ☐ D genetic disease

Challenge 1 of 2

When Core is finished. Full sentences.

C1 In richer countries, most deaths are now caused by non-communicable diseases rather than by infections. Explain why this has changed since the 1840s. Use the words hygiene, immunisation and lifestyle in your answer.

Challenge 2 of 2

When Core is finished. Full sentences.

C2 Medicines taken by mouth are absorbed into the blood and then enter cells by diffusion. Explain how diffusion happens, using ideas about particles.

Exit Ticket

Hand this card in at the end of the lesson.

Name _____

1 What is a pathogen?

2 Give one example of a non-communicable disease and explain why it is non-communicable.

3 Name two types of microorganism that can be pathogens.

Today I can: Goal 1 ☐ Goal 2 ☐
